

How to Spellcheck in Moodle 2.5

The old legacy spellchecker in Moodle which once appeared in the toolbar is gone. Moodle changed to using the built-in spell checking systems of the web browser.

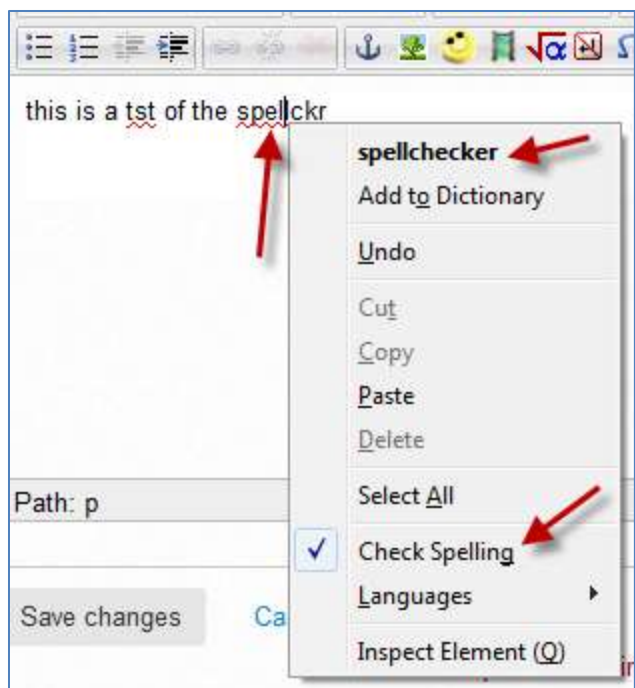

Step 1: Type the content into the assignment box or anywhere in Moodle that is a place where there is text input. Note: this can be turned off in quizzes by instructors.

In this sample you will see two misspelled words that were identified by the web browser and have wavy red lines under them:

Step 2: Place your cursor on the misspelled word and click on the word. Then right-click to reveal the spell-checker options for correcting the spelling. Find the option you want and then release the control key and left click on the word you want to replace the one you originally typed.

Sample screen shot shows the word on which the cursor was positioned when the control + right click was performed. It also shows that there is a check next to the words Check Spelling on the menu. This indicates the browser spell checker is turned on. If this does not appear, you can turn it on by left clicking on that menu next to Check Spelling. The correct spelling appears at the top of the menu in bold and you can right click on it to replace the misspelled word.

Repeat Step 2 for every misspelled word.
